ABOUT ME

Computer Science and Engineering undergraduate with a strong foundation in software development and a primary focus on Flutter and Dart. Skilled in problem-solving and application development, with a strong interest in mobile development, machine learning, and artificial intelligence. Seeking opportunities to contribute to innovative software solutions while continuously expanding technical skills.

EDUCATION AND TRAINING

Bachelor of science

University of Asia Pacific

Field(s) of study: computer science and engineering Final grade: CGPA: 3.90

07/01/2023 – Current
dhaka, Bangladesh

SSC

Chattogram Collegiate School

Field(s) of study: Science Final grade: GPA 5.00

01/01/2016 – 06/2019
Chittagong

HSC

Chattogram College

Field(s) of study: Science Final grade: GPA 5.00

01/07/2018 –
31/12/2020
Chittagong

SKILLS

Programming Language

Dart / Python / java / C / C++ / Javascript

Framework

Flutter Framework / MERN Stack (MongoDB, ExpressJS, ReactJS, NodeJS) / Django web framework

Tools

git / github

HONOURS AND AWARDS

Vice Chancellor Award

University of Asia pacific

Awarded Vice Chancellor's Award for Academic Merit four times in recognition of excellent academic performance.

Dean Award

University of Asia pacific

Awarded Dean Award for Academic Merit two times in recognition of excellent academic performance.

Government Scholarship

Bangladesh Education board

Awarded Government Talent Pool Scholarship (SSC & HSC) for consistent top academic performance

PROJECTS

RiceBDNet: A Large-Scale Rice Image Dataset and Real-Time Deep Learning-Based Framework for Automated Variety Classification

01/01/2026 – Current

Conducting research on automated rice variety classification using deep learning and computer vision by developing RiceBDNet, a large-scale dataset of BRRI rice varieties and real-time classification framework involving data collection, preprocessing, model training, and evaluation. Investigating lightweight deep learning models for real-time deployment and performing comparative evaluation, currently focusing on model optimization and result analysis

Flutter-weather-app

01/07/2026 –
01/08/2026

- Developed a Flutter weather application integrating the Open-Meteo API for real-time weather data and 7-day forecasts.
- Implemented device geolocation, geocoding, and global city search for location-based weather updates.
- Built reusable widgets and a modular architecture separating screens, models, services, and utility logic.
- Designed responsive UI with hourly forecasts, weather highlights, dynamic weather-based visuals, and light/dark theme support.
- Built and tested a release Android APK for deployment on physical devices.

AnyManga

01/01/2025 –
30/03/2025

- Developed an academic full-stack web application for selling manga and manga-based merchandise using Django.
- Implemented user authentication, product browsing, shopping cart, and order management functionality.
- Designed relational database models for users, manga, merchandise, carts, and orders using Django ORM.
- Integrated frontend and backend components to create a complete e-commerce workflow.

Payra

01/04/2025 –
01/06/2025

- Built a full-stack e-commerce web application called Payra using MERN stack
- Implemented key features: authentication, product browsing, cart, and order system
- Developed RESTful APIs for frontend–backend integration
- Designed a responsive UI using React.js
- Used MongoDB for data storage and management
- Gained experience in full-stack development and API design
